

ENVIRONMENTAL Monitoring, Control, Telemetry

PRE-ENGINEERED INTEGRATION

The Remote Asset Gateway panel by Integrasense provides a complete pre-engineered solution for environmental site and equipment monitoring. Simply connect your sensors, vacuum switches, level, pressure, relays and contactors to the pre-wired terminals. Configuration of all monitoring, control and alarm settings is done via a web browser

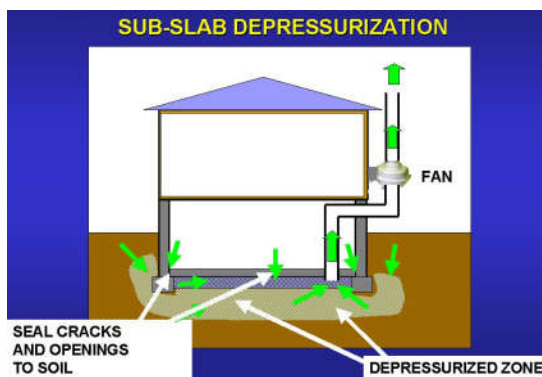

DATALOGGING

A full set of configurable functions are available and easily selectable via your web browser to allow tracking of all your equipments key parameters. Electronic chart and event recording are provided and can be viewed from any location and sent via email. Statistical and status reports can be sent on demand or on a schedule.

ALARM MANAGEMENT

The Gateway can provide intelligent alarming via email or text messaging to your cell phone to one or many recipients.

Typical application:

- ◆ Easy Installation
- ◆ Web Browser Configuration
- ◆ Collect Data
- ◆ Send Intelligent Alarms
- ◆ Email Reports
- ◆ Send Text Messages
- ◆ Remote Web Browser Monitoring

EMERGENCY BACKUP

An embedded backup power system enables data collection and communication for up to 8-hours during power outages.

INTERNET COMPATIBILITY

The Gateway has an embedded web server. Real time graphical web pages can be viewed from anywhere. Accessing it remotely is just like going to any other Internet site; all you need to do is provide one or more connections using the built-in Ethernet.

MULTI-COMMUNICATIONS

An optional phone modem or wireless GSM cellular service provide additional communication methods.

SECURITY

Multiple security levels are provided allowing only authorized personnel the ability to view the Gateway.
